

TCell

The world's first continuous odor control system is one of the latest innovations by Technical Concepts. Utilizing a patented fluid delivery system, the **TCell™** delivers a precise dose of pure designer fragrance and odor neutralizer for 60 days without the use of batteries.

Highly Effective Continuous Odor Control

Conventional gel systems lose their fragrance intensity during the life of the refill, but with the revolutionary TCell it remains constant, delivering a consistent level of fragrance throughout the 60-90 days refill life, each covering an area up to 6,000 cubic feet.

High Quality Designer Fragrances

A wide range of customer preferred fragrances are available, from mild to intense, for a clean, fresh scent that lasts. Every TCell refill contains only the highest quality of essential oils as well as Microtrans®, a proprietary true odor neutralizer, to reinforce the cleanliness and image of the room.

Sleek, Attractive Design

The decorative range of slim dispensers ensures a perfect fit for any decor. As the dispenser has no moving parts, it is noise free and hence discreet in any situation.

How TCell Works

The fuel cell creates hydrogen with the fragrance chamber. As each molecule of hydrogen is created, it forces (pushes) an equal volume of fragrance out of the chamber. Natural air flow distributes the fragrance throughout the room.

The Perfect Environmental Solution

TCell promotes clean and fresh ambience in an environmentally friendly way. Operating without the use of batteries, the high quality fragrance is accurately dispensed without the use of propellants or added volatile organic compounds (VOC). The components of the refill are completely recyclable.
